Statim 2000 Sterilizer New

[For price please contact us](#)

The Statim 2000 is a reliable cassette sterilizer that's compact enough to fit in patient treatment areas and fast enough to sterilize expensive Lasik, PRK, endoscopic and cataract instruments, including phaco handpieces, between procedures - it can complete an unwrapped sterilization cycle in just six minutes and a wrapped cycle in 14 minutes.

The Statim 2000 is fully automatic. Simply select one of the three sterilization programs and with a single touch of the keypad, begin the cycle. An advanced microprocessor controls all functions and maintains optimal sterilization conditions, from start to finish.

SciCan's Statim cassette sterilizers have a biological effectiveness that has been proven in tests for hollow and solid instruments at many internationally recognized institutes in Canada, the United States and Europe.

Statim 2000 delivers sterile instruments in 6 ½ minutes ready for use using fresh water each cycle, drying instruments without exposing them to external air

Specifications:

Chamber Size:

1" (H) X 7" (W)

11" Deep

Brand New Machine

Automatic (electronic) controlled

Steam Sterilizer

Power Supply: 110V

6 minutes cycle

Table Style

Weight: 55.00 Pounds.
